EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 9-23 are cancelled, being drawn to non-elected inventions, an election of claims 1-8 being made "without traverse" in the reply filed November 18, 2009.

Allowable Subject Matter

2. Claims 1-8 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Contrary to indications by the International Search Report, the prior art does not suggest the claimed ion doping apparatus particularly characterized by a beam current meter for measuring beam current of accelerated ions containing an element to be used for doping *wherein* beam current is measured by the meter a plurality of times, *and* if a result of the measurements indicates stability of the beam current, (*then*) the ion apparatus *automatically begins to implant*.

Prior art cited by the international search report and cited on IDS papers filed by applicant include a number of inventions that employ multiple or continuous beam current measurements to achieve stable beam current. However, none of the cited prior art references suggest the claimed configuration of the instant case, in which a plurality of measurements of beam current (e.g. measurements of current density) are employed

Art Unit: 2826

to determine beam current stability, at which time the beam is then permitted to “begin” implanting. Other prior art, such as EP 1 047 103 A2 cited by the International Search report, does not automatically begin implanting when the beam is stable, but rather a plurality of beam current measurements are used to adjust for calculating dosage, which is different than automatically beginning an implant to the target when a plurality of measurements indicates the beam current is stable. The JP 2001-101990 and JP 2000-315473 references cited in the International Search Report disclose a “uniformity control routine” wherein the beam current is controlled and measured a “predetermined” number of times by the operator, yet the limitation of automatically beginning, for example, implanting upon measured beam current stability is not disclosed or suggested.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
